

# Nimbus

A supportive chair with recline for more ambulant users

Nimbus is a supportive chair for users that are normally still ambulant but require adequate seating for shorter periods of time.

Nimbus benefits include a ramped seat which prevents users sliding forward in the chair, and a reclining backrest to allow for a more relaxed position if the user is resting.

## Features and benefits

- Suitable for multi-user environments
- Works with ceiling and mobile hoists as well as for standing transfers
- Ramped seat prevents users slumping in chair
- Reclining backrest
- Four locking castors
- 127kg Capacity

The chair has an adjustable seat depth to help accommodate multi-user environments as well as interchangeable back and seat support cushions. With medium level pressure relief in the cushion as standard, and adjustable backrest pillows, users will find the Nimbus both comfortable and supportive. The chair is on castors to help with transferring clients from room to room, saving carer time.
