

Millennium

Highly customisable
riser recliner chair
with excellent
support and pressure
management

For a customised approach to seating, the Millennium is our most versatile chair offering dimensions, pressure relief and frame adjustments that no other chair can.

The Millennium can be built to a specific set of dimensions, whilst the choice of frames will deliver the right lifting mechanism for the user. Our most popular, the dual motor tilt in space frame, can be set to achieve three different lifting patterns.

Features and benefits

- Our most configurable riser/recliner chair
- Different lifting patterns to suit the user, including vertical lift option
- Optional electric armrest to all independent side transfers
- 160kg SWL
- Minimum seat height – 13" (33cm)

The patented electric lift up arm is an example of the adaptability of this product. Aimed at facilitating independence and reducing care packages, the arm will be raised at the touch of a button allowing obstacle free movement to and from a wheelchair. To enhance the options further, our new frame now offers extra high vertical lifting – ideal for clients who carry out side transfers.

Various backrests and seat cushions can be used to give the support and relief required, along with wedges to provide further specific lateral support and comfort. Special cushions and air alternating seats can be supported with the Millennium.

DIMENSIONS

| | |
|----------------------|-----------------------------|
