Routine and Responsive Servicing & Warranty

At Wealden Rehab we are committed to help you cut long-term costs. To assist you with this and to make sure users get the most from the equipment we supply, we offer both Silver and Gold Level agreements for your peace of mind.

Silver Service Agreement

Our trained engineers attend site bi-annually to complete routine preventative maintenance in accordance with manufacturers recommendations and LOLER regulations.

Gold Service Agreement

Includes the 'Silver Service' agreement, and in addition covers the equipment against breakdown beyond the standard warranty. Out of hours support with trained engineers on call.

Available as 1, 3 and 5-year agreements. Bespoke contracts available by request.

Call our sales office for more details or visit wealdenrehab.com/warranty

Care Equipment Excellence

Welcome to Wealden Rehab

Dale Campbell
Project Division Director

When it comes to the design and installation of care equipment, there's often a challenge. Maybe it's the space, the budget, the timescales – or a combination of these. We have such a strong reputation because of the way we consider and approach these challenges. Like figuring out how to install a track system when the walls aren't load bearing, or delivering a fully compliant Changing Places facility with a tight deadline.

You also see our value in the details that make the equipment easier to use and maintain, so our client gets the most value from their investment. We ensure you get hoist systems that stay charged, shower trolleys that maximise carer access and changing beds that comfortably accommodate a range of users (to give but a few examples).

This means that when you partner with us, you'll get a result you can be proud of – that fulfils users' needs while fitting in with your budget, building requirements and aesthetics.

A stylized, handwritten signature in black ink that reads "Campbell".

Why Wealden Rehab?

Combined experience in the care and construction industries.

As a business, we've specialised in care equipment design and installation for more than 15 years, but we also have heritage in the building industry. From bathrooms, classrooms and bedrooms to pools and complete care suites – our multidisciplinary expertise ensures you get creative solutions grounded in technical expertise, delivering the best result for the space, the users and their carers.

Considerate and proactive customer care

For example, we'll agree mutually convenient installation dates, avoid specific times when necessary and use a particular parking space or entrance door.

Part of finishing a project is making sure it works as it should, so we also train carers who will be using the equipment each day, if appropriate.

Transparent pricing

Once we've agreed on the equipment that's required and we're sure that it's all going to work as a system, we give you a straightforward proposal with line-by-line pricing, so you can see exactly where your budget is allocated. We're more than happy to go through it with you face-to-face, adapting the specification where necessary.

Efficient service

We're normally one of the last subcontractors on site – most of our equipment is fitted to decorated surfaces or placed in rooms almost ready for occupation. With this in mind, we work quickly, delivering projects on time so the investments start paying for themselves.

Foreland Fields School

Foreland Fields School

Complete design and installation of ceiling hoists systems throughout all areas of this new-build school for pupils with profound, severe and complex needs.

Requirements

Foreland Fields School in Kent relocated to a new building, and 23 rooms needed ceiling hoists – from the PMLD classrooms to hygiene rooms, sensory rooms and the therapy pool. The architects approached us to design and install hoist systems that would be easy for staff to use and comfortable for pupils.

The school also wanted to have a flexible solution so they could relocate hoist systems in future as necessary.

Challenge

There were some inherent challenges with the building superstructure that made hoist installation difficult. No walls were load bearing, and without putting secondary steelwork in the relevant rooms, it wasn't possible to install tracks in the conventional way.

“ The ceiling track hoists are really important for our school – they make areas of the school inclusive so all pupils can access all the facilities. The hoists are easier for staff to use, they’re not a hazard for other children who may be using the rooms and they’re better for the children – they’re smoother and they give them better comfort when they’re being transferred in different positions. ”

Sarah Thorp
Head of Key Stage 2
Foreland Fields School

Track systems

Hundreds of track configurations to work in any environment.

V5 Duo ceiling hoist unit

A ceiling hoist with multiple track options. Available with a host of accessories to make your transfers as smooth as possible.

Solution

Working closely with the project architect, we recommended V5 Duo ceiling hoist units and track systems. Using long-span tracking and wall post systems, we installed 28 ceiling hoists across the school. This included complex room-to-room tracking in areas like the therapy pool.

The therapy pool is in a large space, and the XY system we installed covers all of it so the pupils can be hoisted from any point. It also goes through to separate assisted changing facilities, so pupils can be transferred smoothly to and from the pool.

The mechanical gate system allows hoists to pass from one room to another.

EQUIPMENT PROVIDED

V5 Duo ceiling hoist units and track systems

Wingham Wildlife Park

Wingham Wildlife Park

Fast fit-out of a Changing Places facility at this popular family attraction.

Requirements

Wingham Wildlife Park is a 26-acre site that's home to animals from reptiles and birds to big cats and primates.

The owners were developing a new toilet block and had planned to have a family bathroom. However, after receiving requests from families of disabled visitors, they decided to create a Changing Places facility instead.

Challenges

By the time the park decided to include the Changing Places toilet, they'd already installed standard Doc M sanitaryware. They wanted to make use of what they already had while still achieving BS8300 compliance.

HeliQ 220kg hoist

The HeliQ overhead hoist features offers safe patient handling across the entire space.

Barella BR32 shower/changing bed with raising backrest

This shower trolley is designed to offer stability, comfort and convenience.

“ We invested in our new toilet block and in the first weekend we saw more than thirty families use the facility. We believe it will be a real success for customers that have these needs **”**

Wingham Wildlife Park

Solution

We specified a ceiling hoist, changing table and other small items, keeping the Doc M sanitaryware while delivering compliance with Changing Places regulations.

We also focused on equipment that would be easy for users and carers with a range of experience. For example, we installed a HeliQ hoist to a room-covering track system with in-rail charging.

This means the hoist is always well charged because it doesn't rely on the last user remembering to return it to the charging station.

Because the HeliQ provides a constant lifting speed regardless of the user's weight, it ensures everyone using the facility has a comfortable transfer.

We also recommended the Barella BR32 shower/ changing bed, which provides better access all round for carers. Plus, the special anti-corrosion treatment, ABS plastic mattress base and stainless steel side rails and fasteners ensure a durable and hygienic solution with minimal maintenance requirements.

The resulting facility is one of the best in an attraction of this type.

Fully Adapted Private Home

Fully Adapted Private Home

Design, supply and installation of a care equipment package for a young disabled user.

Requirements

The user lives with his family in a property that's been extended and refurbished to a high standard. He needed a hoist system and a hygiene solution that met his needs, was easy for family members to use and complemented the house's look and feel.

Challenges

The project architect first approached us to solve an issue with hoisting – they'd consulted a range of specialists and were repeatedly told what they wanted was impossible. They needed to link 3 rooms – the bedroom, bathroom and hydrotherapy pool. Because these were arranged in a L-shape configuration, it wasn't possible to connect them using a standard XY system with transition gates. Additionally, the building structure didn't allow us to install tracks in certain areas.

“ It was important to us that our new residence looked homely, whilst incorporating all the equipment our son needed. We found Wealden Rehab very approachable and understanding of our needs, and we are very happy with the end result ”

Home Owner

V5 Duo ceiling hoist unit

A ceiling hoist with multiple track options. Available with a host of accessories to make your transfers as smooth as possible.

Avero specialist care bath

Tough enough to withstand the rigours of the care environment. With an integral changing bench.

Solution

We developed a creative single system using V5 Duo ceiling hoist units and tracks to connect the 3 rooms. We used traditional ceiling brackets in conjunction with wall fixings in areas where the ceiling structure couldn't support the full load.

Working alongside the family's occupational therapist, we also specified an Avero specialist care bath and Barella shower/changing trolley. The Avero bath's large tub will meet the user's needs as he grows. The Barella trolley's range of anti-corrosion features, including stainless steel side rails and fasteners, provides a long-lasting, hygienic solution without requiring expensive ongoing maintenance.

The result achieves everyone's goals – the architect, occupational therapist, the user and his family. It's practical, easy to use, flexible and fits in with the property's aesthetics.

EQUIPMENT PROVIDED

Larkfield Leisure Centre

Larkfield Leisure Centre

Specification and installation of pool hoist in a popular leisure centre serving a wide range of users.

Requirements

Larkfield Leisure Centre is proud of its accessibility and wanted to improve the quality of service it offered disabled customers using the spa pool. The project architects approached us to help specify a suitable hoist system.

Challenges

The hoist needed to be accessible and cope with requirements to lift users into specific positions in the pool. However, it also needed to be out of the way when not in use, as most of the pool users aren't disabled.

The spa pool was going to be in an elevated position, but the surrounding area only had limited space for mounting a lift. Also, the ceiling height varied across the room, with some sections so low that they could impede lift height. As a result, the room wouldn't structurally support a conventional ceiling track.

Solution

We specified a Heron pool lift with a seat and transporter chassis. Because it's manufactured from stainless steel, it has an unrivalled lifespan in wet environments. It has superior lift height and reach, making it suitable for a wide range of users, and the spreader bar gives a variety of options for user support. The battery-powered electric motor makes for easy transferring.

To address the mounting issue, we helped design a custom support framework under the deck area for the pool lift socket.

The resulting system gives the lift range and height users need to enjoy the pool, and helps the leisure centre maintain its position at the forefront of accessibility.

EQUIPMENT PROVIDED

Heron pool lift with seat and transporter chassis

Arndale Shopping Centre

Arndale Shopping Centre

Complete design and fit-out of a Changing Places facility in large shopping centre looking to attract a wider customer base.

Requirements

The Arndale Centre in Eastbourne has more than 70 shops and a packed events calendar. The management team wanted to include a Changing Places facility to attract more disabled customers and their families and carers.

Challenges

There was no single room that could be adapted into a Changing Places toilet, so we needed to think creatively about how to create a convenient space that would be BS8300 compliant.

CHANGING
PLACES

William Plumridge
Centre Manager,
Arndale Shopping Centre, Eastbourne

Solution

We identified 2 adjacent rooms that could be amalgamated into a single, compliant space. Then we worked on the client's behalf to provide a scheme layout. We recommended the Premium basin mount, which is height adjustable, and the Aquaclean 8000plus Care wash/dry toilet, which is ergonomic, easy to clean and offers hands-free operation. The Premium 200 changing bench has a convenient handset, so it's easy to adjust the height, and the user platform can be folded to give more space in the room.

We also specified a hoist with an in-rail charging facility, so it would always be ready for use without relying on the previous user returning it to a charging station.

We then coordinated with the main building contractor on site to ensure everything went smoothly, including the correct placement of all services.

The result is an easy-to-maintain, sustainable and highly functional Changing Places facility that's transformed the centre into a popular day out for disabled shoppers, their friends and family.

Private Home Care Suite Installation

Hoist and Bath Installation in a Private Home

Creating a care space that feels like a home

Requirements

The OT was working with a profoundly disabled young adult to create a lifetime home. When it came to the hoist system, there were two primary goals – to create something aesthetically pleasing and to minimise the number of transfers.

The client also wanted to purchase a new care bath but required a great deal of postural support.

Challenges

The hoist system needed to be fitted in the bungalow's extension, and the plans were already completed when we became involved. This meant we needed to work within the agreed layout. The property had lower-than-average ceilings, so lifting height was a consideration for a taller client.

Given the bathroom layout and postural support requirements, the client and his OT were struggling to find an appropriate bath.

Solution

We designed 2 linked XY room coverage systems using the sleek, compact GoLift. The hoist works across the bedroom and bathroom, so the client can move between them in a single transfer from any point in the room. We also added hoists into his therapy and living rooms to minimise transfer requirements even further.

We suggested the Avero Motion bath which has both height adjustment and a unique tilt-in-space action that offered the exact support the client needed.

The result was full room coverage, minimal transfers and a supportive bath – all of which exceeded expectations in terms of aesthetics and functionality.

“ a functional, practical space that looks and feels like a proper home ”

Caroline, Private OT

Changing Places Installation

Changing Places

With Changing Places, life becomes less stressful and easier to manage.

Most people don't have to think about whether they'll be able to use the toilet when they go shopping or to the seafront, but for those with complex disabilities it's a daily struggle.

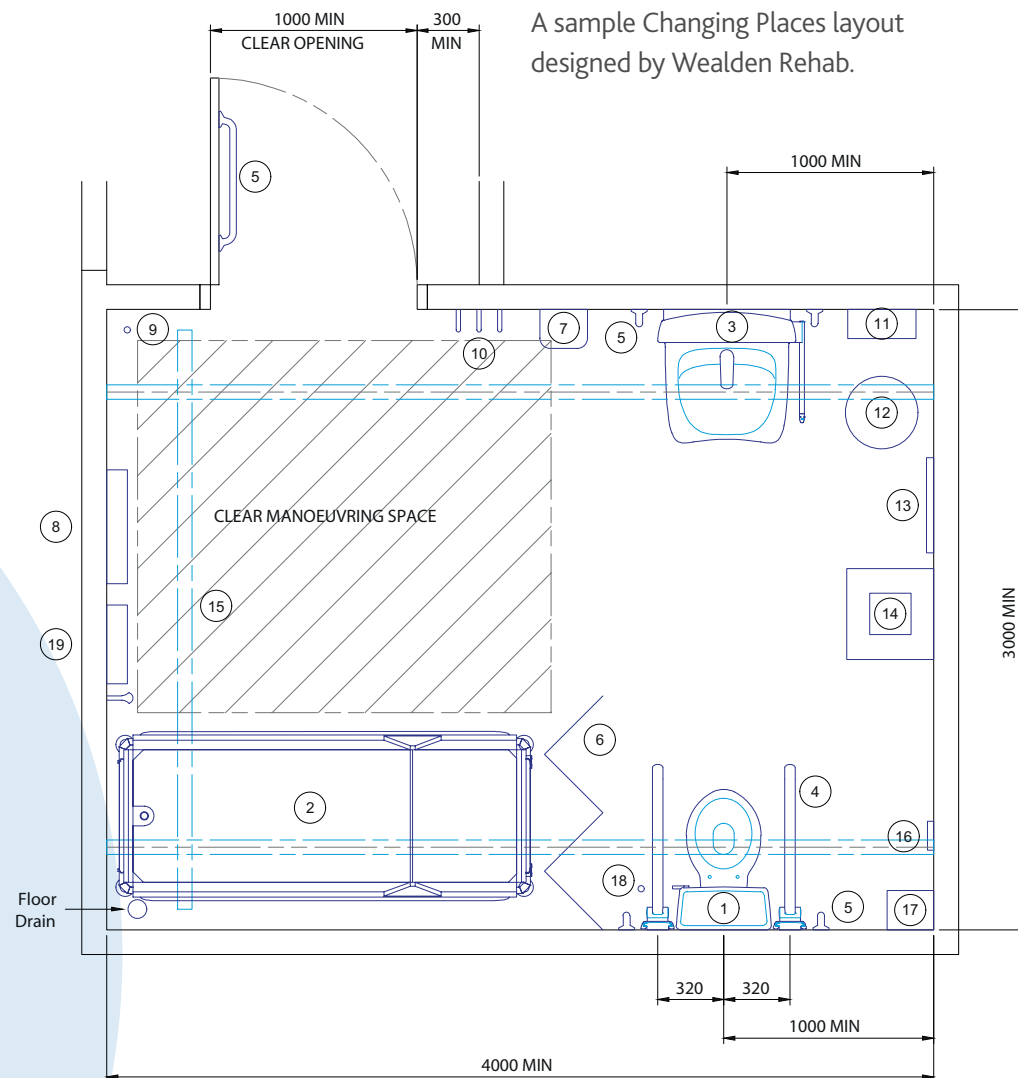

Being able to access a Changing Places facility means that disabled users can spend more time out and about. Instead of having to leave a shopping centre after two hours because there are no suitable changing facilities, people can spend the whole day shopping – resulting in increased revenues for facilities operators.

We're a keen supporter of the Changing Places campaign and have been a key installer in many Changing Places projects. Our Projects team can help by advising on room layouts, ensuring that spaces comply with regulation, and will work with architects, contractors and professionals to ensure you get an excellent result.

“Your team were very professional and they took the time to work alongside our building contractors, ensuring that the finished room meets all of the legal requirements but most importantly works well and looks amazing for our clients.”

CEO
YMCA

Ceiling Hoisting

Whether in the community, school, hospital or other communal environments, ceiling hoists are widely used and acknowledged as the best solution to hoisting requirements. At Wealden Rehab, we believe that the difference is often down to the design – and this is an area we can assist you. With multiple track choices, fixing options and weight capacities, and models that work in different situations, we can provide a solution that will give the end user a safe and engaging experience.

Our case studies highlight the breadth of different applications we have been involved in. From one-track installations, through to multi-room solutions we can assist you with the best solution.

GoLift

Discreet and contemporary design

GoLift is an ideal ceiling lift system designed for routine transfers of patients. It boasts state-of-the-art battery technology coupled with all metal gears that allows the caregiver to safely and effortlessly, transfer a patient weighing up to 318kg on a single lift. For larger patients, we combine two GoLift 700 systems to obtain a lifting capacity of 500 kg.

GoLift is designed to maximise the effective lift height in any scenario. Its super-compact dimensions and slim-line rails ensure that GoLift can deliver fantastic transfers in situations where lift height is a challenge

GoLift is suited to everyday use, its smooth edges and rounded corners are not only aesthetically pleasing but help address infection control requirements.

Our modular track gives you flexibility to suit the needs of any working environment. Depending on how the hoist is to be used, we are able to design and fit straight, curved and XY (full room coverage) track configurations.

For more information and to download the GoLift brochure visit wealdenrehab.com/golift

FEATURES

- ✓ Emergency Stop, Lowering Device & Manual Lowering
- ✓ Upper & Lower Limit Detection

Bath Hoisting

The original column bath hoist:
modular and robust

The Autolift is a strong, attractive bathing hoist, which is equally at home in the private residence as it is in a hospital or nursing home. Whilst it is simple in its design and approach, the hoist will solve problems in transfer experienced by many users and carers alike. It is constructed in a way that will withstand the rigours of the humid bathroom atmosphere, giving years of reliable service.

We offer the Autolift hoist in both battery powered or manual configurations; the battery version allows control through a two-button handset and has a removeable battery for charging outside the bathroom. The manual column is carer operated and is very simple and easy to manage. We will help you to choose the most appropriate lifting arm for your existing bath, which will couple with the seat of your choice.

To make transfers easy between bathroom and bedroom, the Autolift comprises a chassis which accepts the Autolift seat; the carer lowers the seat whilst attaching the chassis, allowing the user to be effortlessly transported through to the bedroom.

FEATURES

- ✓ Stainless steel
- ✓ 127kg weight capacity
- ✓ Powered or manual versions
- ✓ 3-year warranty
- ✓ Fixed or removable mobile seat
- ✓ Custom base plates available to suit any floor type
- ✓ Emergency Stop

AutoLift
bathing hoist

Pool Hoisting

A pool hoist gives disabled users access to spas and swimming pools

The Heron pool hoist is manufactured from stainless steel and is available with a patient seat or with a spreader bar for use with a soft sling, giving a large range of options for client support.

Heron uses a battery-powered electric motor, for effortless patient transfers.

It is available in 4 designs, making it very configurable and flexible, while a selection of floor sockets means that new builds and retrofit installations are equally straight forward.

heron[™]

FEATURES

- ✓ Stainless Steel construction
- ✓ Can be used on either above ground or below ground swimming pools
- ✓ 2-year Warranty
- ✓ Different fixing options
- ✓ Spreader bar or seat options

Shower Trolleys

Shower trolleys offer safer patient transfers and easier showering.

They are equally at home in environments such as hospitals and leisure centres, as they are in domestic surroundings.

Barella shower trolleys are available in models to suit paediatric, adult and bariatric patients. With three frame options with weight capacities up to 245kg coupled with choices on the platform width, you can specify exactly the right trolley for the application.

All Barella shower trolleys feature an anti-corrosion treatment which is backed up with our 3 year warranty.

Barella adult shower trolley with wide platform

FEATURES

- ✓ Anti-corrosion process
- ✓ Stable & generous platform
- ✓ Single-handed plug operation
- ✓ Adjustable height between 610mm – 1000mm

A regular choice for changing places.

Bathroom Safety

ProfiloSmart is designed to add flexibility to bathrooms.

ProfiloSmart boasts a clever wall track with a unique cover design that allows bathroom accessories to be added or removed within minutes, leaving the area highly adaptable to meet the needs of different users.

An extensive range of ProfiloSmart bathroom furniture is available including washbasins and shower seats. A selection of matching fittings and accessories completes the range, including hinged arm supports, taps, dispensers, towel rails and shelves.

This flexible system can be used in care homes, hospitals and other public spaces. ProfiloSmart is also at home in private dwellings and in hotel rooms where its flexibility can quickly adapt a space, whilst a palette of colours and materials will ensure it fits with the surroundings.

The wall track profile lends itself to high-strength installations on many wall types whilst the unique hinged cover protects the profile from scum and water damage.

ProfiloSmart – enabling universal design

Height adjustable basin

Wall track available in a range of colours

Height adjustable shower seat

Wall mounted lift-up arm support

Wall mounted height adjustable lift-up arm support

Lift-up arm support for horizontal track height and sideways adjustable

Bathing

Care baths that work well whatever application or environment

When specifying a bath, there are many factors to consider – the access, method of transfer and size of the bathroom to name just a few. At Wealden Rehab, we will assist you get the most of your space and ensure the bath will work well whatever application or environment.

The options we offer vary with the different baths in our range, but will normally include:

- chromatherapy lights
- air spa
- WRAS Gantry and shower
- thermostatic taps
- aromatherapy system
- music system

Some models also have provision for an integral changing table, and often an in-bath support can be provided to make it a more safe and more enjoyable experience for the user.

Bespoke padding requirements can be catered for – speak to our sales team to discuss your requirements.

[View our full range of bathing options at wealdenrehab.com](#)

Getting the right bath

We understand that purchasing a bath represents a significant investment. Our advisors can help you choose the correct bath from our extensive range, and ensure it fits your budget too. And we can help with the room layout design if required.

We can help with facility planning with our CAD drawing capability.

Compact baths

Many installations have space constraints, and our range of compact baths mean you will still be able to have a very functional solution for both hoisted or self-transferring users.

Kiva height-adjustable bath shown with optional in-bath support system

Compact height-adjustable bath shown with optional WRAS Cat 5 shower gantry

Semi-ambulant users

The **Syncra** height adjustable bath is designed to offer comfortable and safe independent and assisted bathing. The fully powered transfer seat and bath are operated at the touch of a button, allowing for quick, comfortable and easy bathing for all mobility levels.

Multi-user and larger bathrooms

The **Avero** is a height adjustable bath which is tough enough for use in high-traffic bathing areas – and it features a large tub which means it can be used from childhood through to adulthood.

Avero works well with our range of hoists and most bathing support systems, it can also be fitted with a Neatfold Stretcher providing a convenient shower and changing surface on top of the bath.

Specialist baths

The **Motion** reclining bath offers safe, stylish and comfortable bathing for the patient.

Only one carer is needed to operate and safely control the bath. The carer can easily adjust the height of the bath and perform the reclining motion for easy access and bathing positioning making it simple to operate.

Height-Adjustable Basins

A height-adjustable basin can make many everyday tasks easier

Height adjustable basins can be adjusted for the requirements of different users. Basins can be lowered to a sitting position or raised to a standing position at the touch of a lever or button while some models are also sideways adjustable.

A range of brackets and fixings mean that height adjustable basins not only contribute to user independence but look great in any environment.

A selection of thermostatic mixer taps with long reach handles or infrared controls are available to complement any height adjustable basin installation.

Matrix basin for a low profile mount

ProfiloSmart provides a wide basin with hand grips

PR4750 Plus height adjustable basin mount c/w basin

PR4950 Premium height adjustable basin mount c/w basin

Thermostatic lever tap

Infa-red mixer tap

Access Ramps

Our ramps are quick to install – and complement the building's aesthetics

Instead of settling for ugly concrete that can take a week or more to install, our modular ramps can be ready to use in just 2 days. It's equally easy and cost-effective to remove, so you have flexibility as the environment's needs change.

Our modular systems have a wide range of ramp and platform sections to meet your requirements. Railings come in an attractive black or green as standard, with additional colours available to match your exterior decoration or branding. Plus you get 3D visualisations and a 3-year warranty, so you benefit from a streamlined process and complete peace of mind.

*I love the thought that
has gone into the design*
